

Vaginal and C-Section Birth Rates

Attached are the maternity related costs for the six-month period from October 1, 2001, through March 31, 2002 (first six months of CYE02). The data is provided in the same format as the maternity information provided in the original data supplement. The maternity related costs are detailed by delivery type and by county.

AHCCCS is releasing the maternity data for this time period since these costs are more representative of actual health plan financial experience and the current reimbursement structure than the data previously provided for CYE00 and CYE01.

The maternity data for CYE00 and CYE01 are consistent across time periods, and therefore, were provided to offerors in the data supplement. Subsequent to the release of the data supplement, AHCCCS and its actuaries have reviewed the most recent maternity data against the current reimbursement structure and actual health plan financial experience. This review has revealed that maternity costs are better represented by the CYE02 data.

Also, after a review of the historical cesarean birth rates, AHCCCS and its actuaries have decided on the following cesarean birth rate percentages for CYE04:

Level I – 24%

(La Paz and Mohave counties)

Level II – 22%

(Coconino, Gila, Graham, Greenlee, Pima, Yavapai, and Yuma Counties)

Level III – 23%

(Apache, Cochise, Maricopa, Navajo, Pinal, and Santa Cruz Counties)
